ENVIRONMENTAL POLICY

We commit to take an environmentally and socially responsible approach to both existing activities and future developments, reducing pollution through the efficient use of material, energy and product substitution to protect and reduce our adverse effect on the environment.

In order to maintain these aims the quality of our products and services are continuously monitored through the use of internal audits, quality objectives and management review meetings. Low level quality system documentation (company procedures and work instructions) are provided, describing how systems work, the responsibilities of the departments and give support/guidance in processes affecting quality.

Top management ensure a framework is provided for establishing appropriate environmental objectives at all levels within the company including minimizing and managing waste, diverting waste from landfill, reducing scrap, recycling, effectively utilizing raw materials, energy and water.

All actions taken will support production efficiency, and continual improvements are driven from the top down, and are reviewed regularly for continuing suitability.

TecnAir are committed to comply with environmental initiatives and to continually improve the effectiveness of the environmental management system in line with the company's business plan.

We are committed to provide staff relevant environmental training to raise their awareness of minimizing waste, spill control methods and other specific site related environmental issues.

The company policy is communicated throughout the organization, and it is understood that supporting the environmental management system is the responsibility of each and every person within TecnAir.
